

FAM Series

SIAE's primary Multiplexer equipment, complements the our TDM equipment (i.e. ALS Series) in order to provide a very wide variety of tributary interfaces and to carry multiple services aggregated on E1 PDH traffic.

The FAM Series units are built in a modular design, with two different dimensions, 2.5RU and 5RU, and can be configured with an extremely high flexibility. With a complete SW configuration capability and a full integration with the Network Management System (NMS5-UX/LX), this makes the network provisioning and services management complete and user friendly.

MAIN FEATURES

- Both, protected and unprotected configuration.
- Protection Schemes: MSP, Ring, Equipment, Power
- Up to 64xE1/64xT1 interfaces

Available interfaces:

10/100baseT
E1/T1
FXS /FXO
E&M
V.35
V.36
DATA X.21
EIA530
RS232
64Kb/s G.703

- Full no-blocking Cross-Connection Matrix
- Full SW Programmability
